Brasília-DF, Brazil · andre@duar.ch · +55 61 92002-8650

PROFESSIONAL SUMMARY

Full Stack Software Engineer designing and deploying scalable enterprise systems within the financial sector. End-to-end ownership across the full software lifecycle — from user experience and frontend architecture to APIs, data modeling, CI/CD pipelines, and containerized production environments. Core stack includes Angular, TypeScript, Python, Node.js, PostgreSQL/MySQL, Apache Airflow and Docker. Experienced in enterprise data pipelines, ETL automation, and BI environments (SAS, Power BI, IBM DB2). Currently pursuing advanced academic training in Data Analytics and Software Engineering. English proficiency: C1 (Cambridge Linguaskill).

TECHNICAL SKILLS

Languages & Runtimes: TypeScript, JavaScript, Node.js, Python, Go, Shell scripting

Frontend: Angular, PrimeNG, React, Tailwind CSS, HTML/CSS

Databases: PostgreSQL, MySQL, IBM DB2 · schema design, query optimization

AI & Data: Apache Airflow, Power BI, SAS Enterprise Guide (ETL & automation), Jupyter Notebook

DevOps & Infrastructure: Docker, Docker Compose, Docker Swarm, Portainer, GitLab CI/CD

Practices: Full-cycle ownership, REST API design, UX/user journey, security, web scraping, agile/scrum/OKR

PROFESSIONAL EXPERIENCE

Full Stack Developer · Banco do Brasil

Dec 2023 – Present (2+ years) | Brasília, Brazil · Hybrid

- Independently architected and delivered multiple large-scale internal applications end-to-end — UX/UI design, user journey mapping, business logic, security, REST APIs, database modeling (MySQL & PostgreSQL), Angular frontends, and GitLab CI/CD deployment.
- Built and managed containerized production environments using Docker Compose and Docker Swarm orchestrated via Portainer, enabling reliable, scalable service delivery within a major financial institution.
- Developed Power BI dashboards with modern, polished designs connected to IBM DB2, providing real-time operational intelligence across business units.
- Designed ETL pipelines and automated business workflows in SAS Enterprise Guide, including personalized mass email automation at enterprise scale.

Previous Roles (Management & Commercial) · Banco do Brasil

Mar 2000 – Dec 2023 (23+ years)

Progressive experience in financial operations and branch leadership prior to full transition into software engineering.

- Managed client portfolios (individual, business, agribusiness) and credit analysis.
- Led operational teams and monitored performance indicators (KPIs).
- Developed early automation solutions and efficiency tools before moving into software development.
- This background strengthens business understanding, stakeholder communication, and systems thinking applied to current engineering work.

OPEN SOURCE & PERSONAL PROJECTS

Persiga — persiga.duar.ch · github.com/duarch/persiga

- Wordle-inspired word-guessing game built in React, TypeScript, and Tailwind CSS with Docker containerization. End-to-end product: game logic, UX feedback loops, responsive design, production deployment.

WallSpot — github.com/duarch/WallSpot

- Go utility that recycles Windows Spotlight images as desktop wallpapers — showcasing cross-language curiosity and systems programming interest.
